Projects

Scalable Payment Gateway Simulator | Aug 2025 – Sep 2025

- Developed a production-scale Payment Gateway Simulator using Java (Spring Boot) with RESTful APIs to handle UPI-like payment flows, authentication, and merchant management, deep functional programming for concise, fault-tolerant logic.
- Configured nginx as a reverse proxy and load balancer to ensure high availability and efficient traffic routing under load.
- Implemented Docker containerization and CI/CD pipelines (GitHub Actions) for reliable, automated deployment across environments.
- Applied modular business logic design using functional programming principles and integrated monitoring (ELK stack) for real-time anomaly detection.

Pebble | A *Minimal Functional Programming Language* | Jun 2025 – Aug 2025

- Designed and implemented a custom functional programming language, Pebble, emphasizing *purely functional paradigms* (immutability, higher-order functions) and extensible compiler/runtime architecture inspired by Haskell/Scala.
- Built a compiler (`pebblec`) and runtime (`pebble`) enabling users to write, compile, and execute `.peb` programs.
- Emphasized fault-tolerant architecture aligned with low-code platform goals.
- Validated with foundational programs such as “Hello Pebble!” for robust pipeline verification.

Multimodal Fake News & Deepfake Detection System | May 2025 – June 2025

- Developed a system combining NLP (BERT) and Computer Vision (CNN/ViTs) using Python, TensorFlow, and PyTorch.
- Implemented late-fusion and attention-based architectures to classify misinformation.
- Applied anomaly detection techniques for automated, intelligent monitoring of large-scale data streams.

Certificates

- Agentic AI Software Development with Azure — *Coursera* | July 2025
- Full Stack Web Development — *Chipherschools* | Jan 2025

Skills

Languages:

C/C++, Java, JavaScript, Python, Kotlin

Technologies & Frameworks:

TensorFlow, Langchain, Azure ML Studio, React JS, Node JS, Android Studio, Firebase, Spring Boot, nginx

Concepts:

Deep Functional Programming (Scala/Haskell paradigms), Purely Functional Data Structures, API Design, Microservices, Distributed & Multi-DC Systems, High-Throughput System Reliability, Low-Code Platform Development, CI/CD Pipelines

Soft Skills:

Adaptability, Problem Solving, Critical Thinking

Education

Lovely Professional University, Punjab | 2022 – Present

B.Tech in Computer Science and Engineering | Phagwara, Punjab

S.R.K D.A.V Public School, Suriya | 2020 – 2022

12th with Science – 75.00% | Suriya, Jharkhand

S.R.K D.A.V Public School, Suriya | 2019 – 2020

10th with Science – 93.00% | Suriya, Jharkhand
